

Queries

Rename schema

1. drop triggers of old database (you can find the query in the [Stored Procedures](#) section)

2. Create new schema

```
create schema `nelsoft_old`;
```

3. run resulting query from the following query in workbench

```
select concat('alter table ','nelsoft','.`',table_name, '` rename to ' , 'nelsoft_old','.`', table_name, '`;') as 'rename' from information_sch  
ema.tables where table_schema = 'nelsoft';
```

4. copy the result as unquoted

5. run all queries

6. add back the triggers
