

Server Setup

System directory on clients units

Directory format standard if the client is using GIT:

C:/NS/WS_X/nelsoft_inventory

C:/NS/WS_X/Autosync

C:/NS/POS

C:/NS/POS/Autosync

Important:

1. This directory should be strictly followed.
2. The used and most updated software should be placed in directories with this format.
3. X is just a counter for copies of the same folder name.
4. The characters "_X" is not necessary for the first copy.
5. For cases where there are multiple folders with the same name, X should be replaced by the # of the copy meaning, 2 should be put on the 2nd copy, 3 on the 3rd and so on and so forth.
6. This is important to be followed for easy implementation of the terminal manager because it will be looking for the default directory.
7. Never keep unused/old copies inside the NS repository.
