

# Server Setup

## Server Setup Checklist

Questions to ask:

- What should be the value of the POSD settings for all the POS?
- is this branch of the client VAT or non-VAT?
- is the client setup as product sync mode = 2?
- which sync software should be included in the installation?
- is the branch already encoded in the client base?
- Which network is this branch included in or is it a standalone branch?
- are there multiple main branch in the same computer? If yes, create a separate prodpic folder for each main branch and update the config.xml file for each.
- is the client customized? what version of the software should I use? the core or their own version?
- What are the versions of the other branches?
- should I setup this branch as Git or not?
- should I setup the autosync or the manual sync?
- If manual sync is to be setup, are the pos also using the manual sync? should I setup the http file server?
